

# AgroTrace — System Architecture

## Agroprocessing Process Management & Traceability System

End-to-end view: users · frontend · backend · data · integrations · deployment

Data flow: User action → validated form (Zod) → React Query mutation → Bun API (auth + RBAC + re-validate) → Drizzle transaction in PostgreSQL (write + lineage links + audit entry, atomic) → cache invalidated → UI refreshes. Each finished pack carries a QR code resolving to its full lot history for public verification.
